

Dirty cabin air filters restrict clean airflow through your truck's ventilation system, preventing optimal operation of your defrost, heating & cooling systems.

Many trucks are equipped with cabin air filters. Although vehicle recommendations vary, cabin air filters should be replaced every 12,000 to 15,000 miles or at least once a year.

Learn how to replace a cabin air filter and more product information at [www.luberfiner.com/extremeclean](http://www.luberfiner.com/extremeclean) or use this QR code on your mobile device.

New Air Filter

Replace Your Cabin Air Filter Today!

Average replacement time is 15 minutes.

# Purify Your Truck's Interior Air

Extreme Clean HD Premium Cabin Air Filters effectively trap 98% of pollutants, pollen, dust, and exhaust fumes (at 5 to 100 microns) before they reach the interior of your truck cab.

**Clean Air**

- Helps keep the interior of your truck clean
- Reduces the amount of contaminants entering your breathing space

Like your household air-conditioning system, your cabin air filter needs to be serviced on a regular basis to keep your vehicle's heating and cooling system operating at its peak condition.
